SKILLS

HTML, CSS, JavaScript, React, Github, Bootstrap, Command Line, API, Node, Sass, Jira, Agile, Git, Version Control, PHP, Wordpress.

PROFILE

I found web development by searching for a career with creativity and problem solving. My passion for it has grown from learning different languages and seeing all that can be created. With all of the skills I have gained over my years of work and schooling I believe that I will be an excellent developer.

PROJECTS

Atlas Audience Chooser | Unearth Internship | July 2021 - Aug 2021

Starting from hosting on Flywheel and Wordpress, I created an application that held data that could be filtered through for a customer to choose an option. I created a Rest API endpoint with PHP, WPDB, and Wordpress and called that data in my application and then used React, Javascript, Axios, and CSS to filter through the data with buttons.

Nevada Housing | Unearth Internship | May 2021 - July 2021

We built a webpage on Wordpress with Flywheel hosting that showed legislator "Report Cards" for the recent voting on Housing Laws in Nevada. My job was to create a custom Wordpress plugin and short code for the report cards that allowed for data about the legislators and voting to be input into a voting graph. I accomplished this with PHP, React, and Javascript. I also created a small application with javascript that could download each Legislator's Report Card as a PDF file.

Chatto | Capstone Project | Oct 2020

A chat application built using React components for the front end and Node combined with socket.io for the back end. The React components were made up of Html, Jsx and Sass was used for styling. An Npm package called "Hepburn" was used to translate from the chat component. The project was built in 5 days and deployed on the web through Heroku and saved through git onto GitHub.

Zwei | Adidas 4D Hackathon | Sep 2020

A single page website built in an Adidas Canada 24 hour Hackathon. This project was completed with a team of developers, data scientists, digital marketer, and UX designers. After being given a mockup from the designers from Figma, I created the static site using React components which comprised of Html, Jsx, and Sass.

Instock | Collaboration Project | Sep 2020

A multi page web application built with a group of developers through the agile process. Jira was used to assign tickets to each member during a single sprint. React with Html, Jsx and sass was used to create the front end, and Node with express was used to create the back end. Git version control and Github were used to collaborate along with continuous integration to solve any problems after each push. This project was completed in one week.

EXPERIENCE

Software Engineer Intern | Unearth Campaigns

May 2021 - Aug 2021, Sacramento, CA

- Worked closely with other software developers and designers to create effective websites for our clients.
- Created custom Wordpress plugins and short code with Javascript and Php to use in our web pages.
- Turned a google spreadsheet into a Rest API endpoint to incorporate data that could be filtered down to a specific option for a customer.

Third-Party eCommerce Specialist | Metalcloak

JAN 2021 - May 2021, Sacramento, CA

- Created enhanced content for Amazon and eBay product pages and digital storefronts targeting the off-road Jeep community.
- Used SEO best practices to create enticing titles and descriptions.
- Created a single page website with Magento using Html and CSS.

Freelance Copywriter

JAN 2020 - July 2020, Remote

- Wrote in a creative and engaging way to sell a brand and a story.
- Gained knowledge of marketing through research of competitors.
- Worked with individuals with small businesses as well as larger companies with long product lists.
